CoreDish™

MULTIPLE BIOPSY CONTAINERS HALF PREFILLED WITH 10% FORMALIN

Made of polystyrene

Few recommendations concerning how the biopsies should be handled have been published. Performing a large number of biopsies means an increase in the number of containers handled and consequently a technical overload of the transmission network, which occurs without any financial counterpart. A new approach had to be developed in order to increase productivity.

Simport is proud to offer a multi-compartment container in the shape of a dish and half prefilled with 10% Neutral Buffered Formalin, for holding and transporting biopsies. It is supplied with a leakproof closure with O-ring ensuring total protection of contents. It conforms to OSHA directives. **The Simport CoreDish™ measures only 15 x 95 mm in diameter.** Each compartment is clearly identified to allow proper placement and visualization of the biopsy being inserted. **Thanks to the CoreDish™ it is no more necessary to use a multitude of individual containers, thereby reducing risks of confusion.**

The Simport CoreDish™ offers many configurations in order to hold different biopsies of the breast, prostate, upper GI tract and lower GI tract. A label allows essential information to be written such as patient I.D., doctor, date and time.

The CoreDish™ is also available without formalin. See Series M971.

1. Well labelled and easy to read identification of biopsy origin
2. Each biopsy is isolated from each other by a divider
3. Molded ridges around lid make it easy to open and close

4. Fast thread design allows lid to be removed with only 1 1/2 turn
5. Specially designed O-ring for a more secure and positive leakproof seal
6. Warning label has space for patient identification

A security label is supplied to ensure integrity of contents from collection stage to reopening of CoreDish™.

To close, turn clockwise until you feel a firm stop.

BREAST BIOPSY CONTAINER For separation, imaging and transport of core needle specimens

Designed specifically for radiography, separation, imaging and transport of core needle breast biopsies. Special absorbent liner keeps specimens moist (when saline solution is added) prior to radiography while helping to attenuate the x-ray beam. Four compartments are clearly identified (3, 6, 9 and 12) and the radiolucent numbers show up clearly on the radiograph. Formalin may be added prior to transportation to pathology for analysis. An area for writing patient information is provided on the label. Leakproof seal, thanks to O-ring lid, allows for safe and easy transport of the specimens from collection to analysis. Not formalin prefilled. Not available in USA.
